

<u>Praktikum – Bagian 1: Instalasi library restful codeigniter</u>

```
$config['index_page'] = '|';
      Dan file autoload.php
       $autoload['libraries'] = array();
       $autoload['helper'] = array();
      Menjadi
        $autoload['libraries'] = array(|database');
       $autoload['helper'] = array('url');
      Dan database.php seperti berikut:
       $db['default'] = array(
           'hostname' => 'localhost',
           'username' => 'root',
           'password' => '',
           'database' => 'rest_server',
           'dbdriver' => 'mysqli',
5
      Selanjutnya buatlah database rest server pada phpmyadmin dan masukkan data dummy.
      Untuk data dummy dapat dibuat sebagai berikut:
       # Name Type
                     Collation Attributes Null Default Comments Extra Action
                                                     AUTO INCREMENT 2 Change 3 Drop ▼ More
       🔲 1 id 🔑
       2 nrp
                       latin1_swedish_ci
                                                                char(9)
                                       No None
                                                                3 nama varchar(250) latin1_swedish_ci
                                      No. None
      4 email varchar(250) latin1_swedish_ci
                                       Yes NULL
                                                                5 jurusan varchar(64) latin1 swedish ci
                                                                Options
      -T→
                          ▼ id nrp
                                                       email
                                                                    jurusan

6
      Selanjutnya extract file Library Rest Server, buka folder application dan duplikasi file dan
      folder tersebut kedalam folder application pada project Code-kedelapan. Klik Replace files
      jika ada notifikasi duplikat.
```

Praktikum - Bagian 2: Membuat Aplikasi CRUD Restful Codeigniter

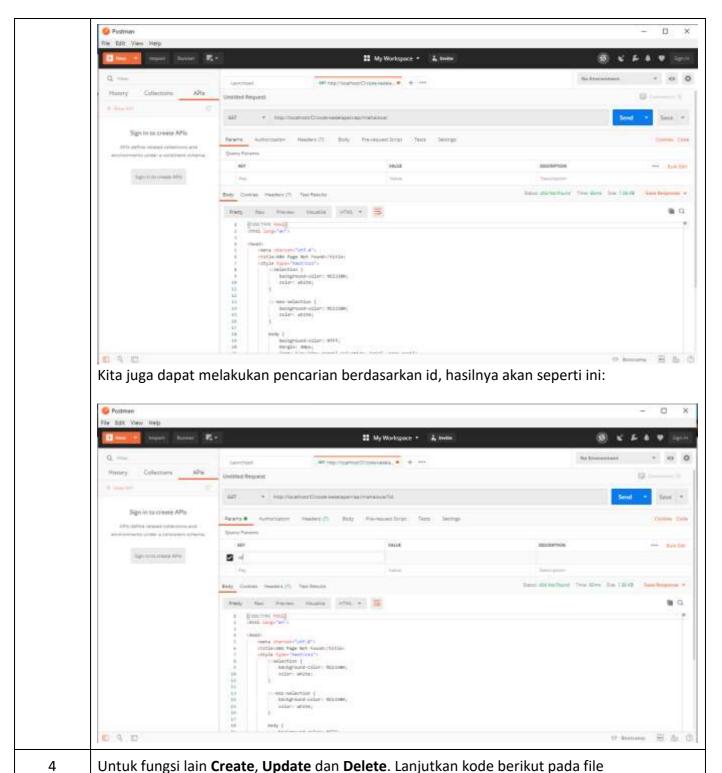

```
Langkah
                Keterangan
     1
                Buatlah file Mahasiswa.php pada controller/api. Selanjutnya tuliskan kode berikut:
                      defined('BASEPATH') or exit('No direct script access allowed');
                      require APPPATH . '/libraries/REST_Controller.php';
require APPPATH . '/libraries/Format.php';
                      use Restserver\Libraries\REST_Controller;
                          function __construct()
                              parent::__construct();
$this->load->model('Mahasiswa_model', 'mahasiswa');
                          function index get()
                               $1d = Sthis->get('id');
                               If ($id --- mull) {
                                   Smahasiswa - Sthis->mahasiswa->getMahasiswa();
                                   $mahasiswa - $2011->mahasiswa->getMahasiswa($id);
                               if ($mubusiswa) {
                                                                                             (B) PHP executable not found. Install PHP 7 and add it to your
                                                                                                                                                   @ ×
                                   Sthis->response([
                                                                                               PATH or set the php.executablePath setting
                                        'data' -> $mahasiswa
                                                                                             Source: PHP Intell/Sense (Extension)
                                                                                                                                            Open settings
                                   ], REST_Controller::HTTP_OK);
```

Selanjutnya Buatlah file **Mahasiswa_model.php** pada model. Selanjutnya tuliskan kode berikut:

```
application > models > * Mahasiswa_model.php > ...
      defined('BASEPATH') or exit('No direct script access allowed');
      class Mahasiswa_model extends CI_Model
          public function getMahasiswa($id = null)
              if ($id === null) {
                  return $this->db->get('mahasiswa')->result_array();
                  return $this->db->get_where('mahasiswa', ['id' => $id])->result_array();
          public function deleteMahasiswa($id)
              $this->db->delete('mahasiswa', ['id' => $id]);
              return $this->db->affected_rows();
          public function createMahasiswa($data)
              $this->db->insert('mahasiswa', $data);
              return $this->db->affected_rows();
          public function updateMahasiswa($data, $id)
              $this->db->update('mahasiswa', $data, ['id' => $id]);
              return $this->db->affected_rows();
                                                                                                              (X) PHP executable not foun
      /* End of file Mahasiswa_model.php */
                                                                                                                 PATH or set the php.exe
```

Buka aplikasi postman, masukkan alamat http://localhost/Code-kedelapan/api/mahasiswa dengan metode **GET**. dan jika berhasil maka tampilannya akan seperti ini:

3

mahasiswa.php:

```
function index_delete()
   $id = $this->delete('id');
   if ($id === null) {
       $this->response([
           'message' => 'provide an id!'
       ], REST_Controller::HTTP_BAD_REQUEST);
   } else {
       if ($this->mahasiswa->deleteMahasiswa($id) > 0) {
           $this->response([
                'status' => true,
               'id' => $id,
               'message' => 'deleted.'
           ], REST_Controller::HTTP_OK);
        } else {
           $this->response([
               'status' => false,
               'message' => 'provide an id!'
           ], REST_Controller::HTTP_BAD_REQUEST);
   }
```

```
// POST
         public function index post()
             $data = [
                 'nrp' => $this->post('nrp'),
                  'nama' => $this->post('nama'),
                 'email' => $this->post('email'),
                 'jurusan' => $this->post('jurusan'),
76
             1;
78
             if ($this->mahasiswa->createMahasiswa($data) > 0) {
79
                 $this->response([
                     'status' => true,
                     'message' => 'new mahasiswa has been created'
                 ], REST Controller::HTTP CREATED);
82
             } else {
85
                 $this->response([
                     'status' => false,
                      'message' => 'failed to create new data!'
                 ], REST_Controller::HTTP_BAD_REQUEST);
          // PUT
94
          public function index_put()
              $id = $this->put('id');
              $data = [
                   'nrp' => $this->put('nrp'),
                   'nama' => $this->put('nama'),
100
                   'email' => $this->put('email'),
                   'jurusan' => $this->put('jurusan'),
              ];
              if ($this->mahasiswa->updateMahasiswa($data, $id) > 0) {
                   $this->response([
                       'status' => true,
                       'message' => 'data mahasiswa has been updated'
                   ], REST_Controller::HTTP_OK);
               } else {
110
111 V
                   $this->response([
112
                       'status' => false,
113
                       'message' => 'failed to update data!'
114
                   ], REST Controller::HTTP BAD REQUEST);
115
116
117
      }
118
```

```
// POST
         public function index post()
             $data = [
                 'nrp' => $this->post('nrp'),
                  'nama' => $this->post('nama'),
                 'email' => $this->post('email'),
                 'jurusan' => $this->post('jurusan'),
76
             1;
78
             if ($this->mahasiswa->createMahasiswa($data) > 0) {
79
                 $this->response([
                     'status' => true,
                     'message' => 'new mahasiswa has been created'
                 ], REST Controller::HTTP CREATED);
82
             } else {
85
                 $this->response([
                     'status' => false,
                      'message' => 'failed to create new data!'
                 ], REST_Controller::HTTP_BAD_REQUEST);
          // PUT
94
          public function index_put()
              $id = $this->put('id');
              $data = [
                   'nrp' => $this->put('nrp'),
                   'nama' => $this->put('nama'),
100
                   'email' => $this->put('email'),
                   'jurusan' => $this->put('jurusan'),
              ];
              if ($this->mahasiswa->updateMahasiswa($data, $id) > 0) {
                   $this->response([
                       'status' => true,
                       'message' => 'data mahasiswa has been updated'
                   ], REST_Controller::HTTP_OK);
               } else {
110
111 V
                   $this->response([
112
                       'status' => false,
113
                       'message' => 'failed to update data!'
114
                   ], REST Controller::HTTP BAD REQUEST);
115
116
117
      }
118
```

5 Dan lanjutkan kode pada file **Mahasiswa_model.php**:

```
public function deleteMahasiswa($id)

{
    $this->db->delete('mahasiswa', ['id' => $id]);
    return $this->db->affected_rows();
}

public function createMahasiswa($data)

{
    $this->db->insert('mahasiswa', $data);
    return $this->db->affected_rows();
}

public function updateMahasiswa($data, $id)

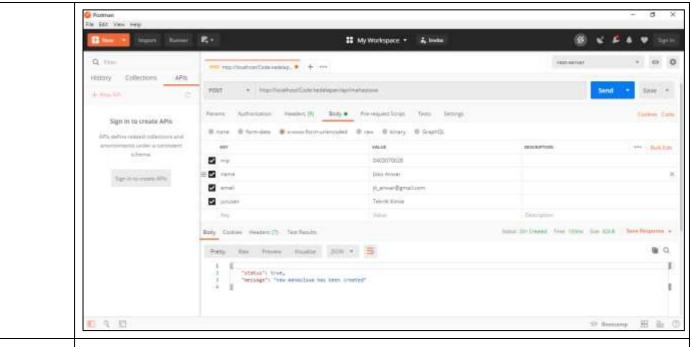

{
    $this->db->update('mahasiswa', $data, ['id' => $id]);
    return $this->db->affected_rows();
}

}

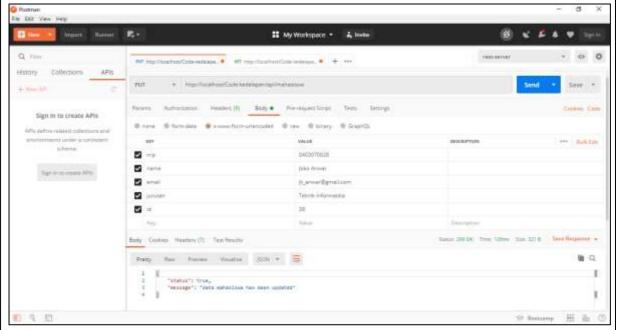

public function updateMahasiswa', $data, ['id' => $id]);
    return $this->db->affected_rows();
}
```

Selanjutnya lakukan operasi **Create** data pada aplikasi postman, untuk operasi **Create**, **Update** dan **Delete**, arahkan parameter ke **Body** dan **x-www-form-urlencoded** seperti berikut:

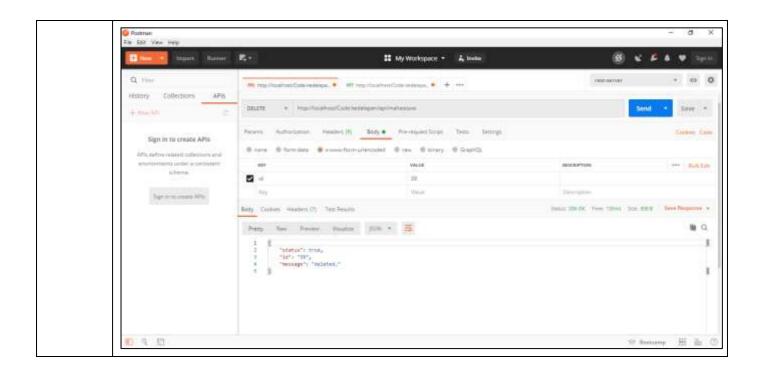

7 Lakukan juga operasi **Update** data pada aplikasi postman, masukkan parameter id seperti berikut:

Lakukan juga operasi **Delete** data pada aplikasi postman, parameter yang dimasukkan cukup id saja, seperti berikut:

8

-- Selamat Mengerjakan –
